

**FOOD &
BEVERAGE**

About SCG Chemicals or SCGC

SCG Chemicals or SCGC is one of the leader in sustainable chemical innovations and manufacturing in Thailand and ASEAN that offers a full range of petrochemical products ranging from upstream production of olefins to downstream production of 3 main plastics resins: polyethylene, polypropylene, and polyvinyl chloride including finished products.

SCGC is committed to conducting business in line with Environmental, Social, and Governance (ESG) and achieving Sustainable Development Goals (SDGs). SCGC is developing new technology and innovation to create high value added products (HVA) and holistic service solutions concerning growing areas such as circular economy, medical & healthcare, and electric vehicle (EV) to better meet diverse places and emphasis demands sustainable environmental stewardship.

OUR PRODUCTION CAPACITY (AS OF 2021)

TOTAL CAPACITY : 3,016 KTA (PE / PP / PVC)

HDPE	980 KTA
LLDPE	140 KTA
LDPE	150 KTA
PP	860 KTA

PVC	850 KTA
PVC Paste	36 KTA

ESG Strategic Directions

“INNOVATION THAT’S REAL”

FOOD & BEVERAGE

SCGC believes in being a part of environmental conservation efforts by creating sustainable packaging.

With population growth on the rise, the issue of waste, especially from food and beverage packaging, has gained attention from both people and companies who wish to take better care of the environment.

SCGC believes in being a part of environmental conservation efforts by creating sustainable packaging. Thus, SCGC has developed its signature SMX™ Technology, an innovative manufacturing process for high-density polyethylene (HDPE) resins that are recyclable, stronger, lighter, and uses less plastic. SCGC has also established i2P Center, an innovation and application development hub where partners can explore novel solutions for HDPE, LDPE, and PP applications that give superior quality and environmentally friendly.

To further reduce environmental impact, SCGC has been working on developing mono-material solutions for fully recyclable packaging. With its longstanding expertise in the petrochemical industry and wide range of networks with research laboratories, SCGC believes that such a solution will grow the near future. For instance, SCGC is currently collaborating with Norner, a research laboratory, as well as other machine makers and brand owners worldwide for these initiatives. With mono-material packaging in sight, SCGC is confident that it can create a more circular economy for everyone in the coming years.

With sustainability at the core of our business, SCGC is passionately committed to improving people's lives and protecting the world for future generations.

Design for Sustainability

2 ZERO HUNGER

9 INDUSTRY, INNOVATION AND INFRASTRUCTURE

12 RESPONSIBLE CONSUMPTION AND PRODUCTION

13 CLIMATE ACTION

RECYCLABLE

Design for Recyclability

The packaging industry is the largest consumer of plastic, and Flexible Packaging is a major type of plastic packaging that takes 70% of the market. Normally, flexible packaging consists of inextricable layers of different materials with different properties and melting points, thus is not easy to get to recycling process.

SCGC's new innovations can reinforce **"Recyclable Packaging Solutions"** that maintain the functional properties of the packaging while using solely PE, PP or PO as materials, thus lends itself to recycling in the post-consumer stage.

Conventional Multi-Material Packaging

Recyclable Packaging Solutions

Recyclable Packaging Solutions

X34H009F

HDPE Resin from SMX™ Technology for Biaxial Oriented Polyethylene Film via a Tenter Frame Technology

Good alignment in CMYK registration at higher line speed for printing process

High clarity with haze ≤ 9%

Recommended Applications

- ✓ Printing layer for recyclable film structure
- ✓ BOPET, BOPA, and BOPP replacement
- ✓ Moisture barrier application

Key Benefits to Customers

- Wider operation window for bag making and packing line
- Better pouch appearance
- Ability to use form-fill-seal machine

P408F

PP Resin for High Heat Resistant Biaxial Oriented Polypropylene Film

4-10% faster packing speed

Better seal appearance

High clarity with haze ≤ 1.4%

Recommended Applications

- ✓ Printing layer for recyclable film structure
- ✓ High-line speed packing machine

Key Benefits to Customers

- Higher speed for vertical form-fill-seal

BWO1501G

Water-Based Barrier Coating Agent for Flexible Packaging

Prevent oxygen permeation

Certified by RecyClass

Meet standard Food Safety Packaging

Water-based with 15% solid content

Recommended Applications

- ✓ Coating agent on film substrates
- ✓ Widely used in food and non-food industrial packaging (not suitable for boiling and retort application)

Key Benefits to Customers

- Tailor-made oxygen barrier level (achievable OTR less than 1 cc/day/m²)
- Ready-to-use one component

AM25

Medium Barrier Coated MDOPE Film for Flexible Packaging

Oxygen barrier < 30 (cc/day/m²)

Water-vapor barrier < 10 (g/day/m²)

Good as a printing layer

No primer coat needed

Recommended Applications

- ✓ Printing layer for recyclable film structure
- ✓ BOPA and BOPET replacement
- ✓ Widely used in food and non-food industrial packaging (not suitable for boiling and retort application)

Key Benefits to Customers

- Prolonged product shelf-life
- Ability to be recycled in the current PE recycling stream

Remarks: All benefits of SCGC BOPE film produced from X34H009F resin, blending with 20-40% LLDPE resin, are compared to general LL-BOPE film
All benefits of SCGC high heat resistant BOPP film produced from P408F are compared to General BOPP film

SCGC GREEN POLYMER™ for Carbonated Soft Drink and Sparkling Water Caps & Closures

SX002J and SX002JA for Sustainable Food & Beverage Packaging

Up to 20%
less plastic use

Reduces at least 224 kg of CO₂ emissions
for every ton of plastic consumed

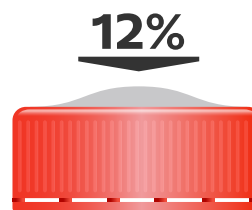

Superior stress cracking resistance

Better gas retention (10%)

Higher bridge strength (15%)

Less doming (12%)

Reference resin: SCGC Bi-modal HDPE for Carbonated Soft Drink and Sparkling Water Caps & Closures

SCGC GREEN POLYMER™ for Carbonated Soft Drink and Sparkling Water Caps & Closures

GRADE	SX002J	SX002JA
Recommended applications	<ul style="list-style-type: none"> - Lightweight carbonated soft drinks - Lightweight sparkling water closures 	
Recommended processes	<ul style="list-style-type: none"> - Injection molding - Continuous compression molding 	
Melt flow rate (MFR) at 190°C, 2.16kg (g/10min) ISO 1133		0.55
Density (g/cm³) ISO 1183-2		0.955
Tensile modulus (MPa) ISO 527 (1B, Speed 1 mm/min)		1,000
Charpy impact strength (kJ/m²) ISO 179 @ 23°C		8
Environmental stress cracking resistance (ESCR), F50, 10% Igepal (hr) ASTM D1693		>1,000
Slip agents	✓	-
Key characteristics	<ul style="list-style-type: none"> - Superior Environmental Stress Cracking Resistance (ESCR) - Excellent balance of stiffness and toughness - Good organoleptic property 	
International compliance standards	<ul style="list-style-type: none"> - U.S. FDA 21 CFR 177.1520 - Commission Regulation (EU) no. 10/2011 	

SCGC™ HDPE: EXCELLENT STRESS CRACKING RESISTANCE for Carbonated Soft Drink and Sparkling Water Caps & Closures

GRADE	H555J	H555JA	H567J	H567JA	H568JA
Recommended applications	<ul style="list-style-type: none"> - Carbonated soft drink closures - Sparkling water closures - Aseptic beverages closures - Still water with nitrogen filled 		<ul style="list-style-type: none"> - Carbonated soft drinks - Sparkling water closures
